

NATIONAL ASSESSMENT 2000

Undiscovered Economically Recoverable Resources Oil (BBO) Gas (TCFG) @ \$30/BBL, \$3.52/MCFG

Alaska Outer Continental Shelf Planning Areas

LEGEND

— Planning area boundary

Note:

The maritime boundaries and limits shown above, as well as the divisions between planning areas, are for initial planning purposes only and do not prejudice or affect United States jurisdiction in any way.

* Economic gas resources reported for the Beaufort and Hope Basin provinces are deliverable to a new processing plant in each area (not existing today). These gas volumes could be transported to markets outside Alaska in several forms (pipelined gas; diesel-liquids; or LNG) at additional cost. The market destination and commodity type will dictate the final cost to consumers. Consequently, these figures do not include all costs to an existing market. Rather they represent a sensitivity study showing what could be available to a local processing plant at a given price. Oil resources listed for the Hope Basin are condensate liquids derived from wet gas and will not be produced unless commercial gas development occurs in the Hope Basin.
