

A CAVITATING WATER JET CLEANING SYSTEM  
FOR REMOVING MARINE GROWTH AND  
FOULING FROM OFFSHORE PLATFORMS

J. T. Parker, II, W. H. Bohli, and  
A. P. Thiruvengadam

December 1979

The work described herein was sponsored by the Research and Development Program for OCS Oil and Gas Operations, USGS, under contract to the Office of Naval Research. Though this document is the final report for a diver held cavitation erosion cleaning device which is pressurized from the surface, the feasibility of a self contained power supply is now under study.

If you wish to comment on the research or desire further information, please contact the authors or USGS.
